Examiner's Reason for Allowance

1. The following is an examiner's statement of reasons for allowance: The prior art of record, in light of the interview dated 1/27/05 and translated document JP8-103948A, fails to teach an apparatus for cooling a molded article having an end-of-arm tool that removes the molded article from the mold halves and onto a frame with a cooling pin, the cooling pin having an internal channel that terminates at the tip and the cooling pin is configured to be spaced away from the and not in contact with the first region. The closest prior art, Suzuki (JP8-103948A), fails to teach this spaced away configuration.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Williamson et al (5338172) has been considered. However, the cooling pin does not have internal channel that terminates at the tip.
- Neter (6461556) has been considered for a double patenting rejection. However, the claimed invention of Neter in claims 26-36 do not teach a cooling pin that is configured to be spaced away from the first region. In fact, the latter dependent claims have the fins which are part of the cooling pin actually touching the article.
